SUMMARY

Fresher Manual QA Tester with hands-on practice in test case design, defect reporting and API testing with Postman. Executed 27 test cases across two public GitHub projects (15 UI, 12 API) and reported 4 reproducible defects with steps, expected vs actual results and severity. Working knowledge of SDLC, STLC, Jira and smoke, sanity, regression and UAT testing. Based in Delhi NCR and available to join immediately.

SKILLS

Manual Testing: Test case design (positive and negative), test execution, bug reporting, defect life cycle, test documentation (test plans, checklists, summary reports)

Testing Types: Functional, Smoke, Sanity, Regression, UAT, API testing

Tools: Jira (defect tracking), Postman (API testing)

Process: SDLC, STLC

Learning: Java basics, Selenium (training, in progress)

PROJECTS

Swag Labs (SauceDemo) – Manual Testing – *E-commerce web app* github.com/Nikhil098/saucedemo-manual-testing

- Wrote a test plan (objectives, scope, approach, entry/exit criteria) and 15 test cases covering login, product inventory and sorting, cart, and the end-to-end checkout flow.
- Executed all 15 cases on Chrome / Windows 11 with the site's demo users: 11 passed, 4 failed.
- Reported 4 reproducible defects (2 Critical, 2 Major) with steps to reproduce, expected vs actual results and severity, e.g. the checkout form rejecting input for problem_user so no order could be placed.
- Verified checkout field validation and price calculation (item total, tax and order total); summarised results in a test summary report.

Restful Booker – API Testing – *Postman* github.com/Nikhil098/restful-booker-api-testing

- Designed and executed 12 API test cases: auth token creation, full booking CRUD (POST, GET, PUT, PATCH, DELETE), search by first and last name, and the /ping health check.
- Covered negative paths: invalid credentials, update without a token rejected (403), and 404 for deleted and non-existent booking IDs.
- 12 of 12 passed; verified status codes and response bodies, documented request/response evidence and shared an importable Postman collection.

ReqLab – Fake REST API for Testing – *Tool I built* singh06.lovable.app/reqlab

- Built a hosted fake REST API with users, resources, auth and delayed responses for front-end and QA testing; every endpoint can be tried in the browser or called from Postman.
- Includes negative-test endpoints (400 and 404 responses) and a ?delay= option to test loading states and timeouts.

Chrak Hospital Management System – *Resume project, details on request*

EDUCATION & TRAINING

B.Sc Information Technology – Kanpur University

2021 | 69%

Software Testing (Manual & Automation) – Qualibytes IT Academy

2026, ongoing

Covers SDLC, STLC, test design, Jira, smoke, sanity and UAT testing.
